Progetto "PoliSeeP"

[Home](#)[About](#)[Services](#)[Team](#)[Contact](#)[Get Started](#)

A smart Software Engineering Education Platform

For students and teachers.

Study and train for your exams, or provide teaching materials and tests to prepare your students.

About

What do we do?

PoliSeeP is a platform designed for students and university professors. It was mainly designed for STEM disciplines. There are two users who use our website:

- **PROFESSORS:** they use PoliSeeP to quickly provide teaching material and to create quizzes to be submitted to students. All this is possible for every course the professor teaches.
- **STUDENTS:** they use PoliSeeP to access the teaching material of all the courses they are enrolled in. In addition, they can train with the quizzes made available by the teachers.

Using HTML(HyperText Markup Language), CSS(Cascading Style Sheet), JavaScript, we can make learning more easier and in a interesting way.

Chapter 1 - Quiz 1 NEW

Chapter 1 - Quiz 2 NEW

Chapter 1 - Quiz finale NEW

Quiz finale

Final quiz for the evaluation of the skills.

1 - Just collecting and storing information isn't enough to produce real business value. Big data analytics technologies are necessary to:

☐ Formulate eye-catching charts and graphs

☐ Extract valuable insights from the data

☐ Integrate data from internal and external sources

☐ Determine business goals and objectives

2 - The method by which companies analyze customer data or other types of information in an effort to identify patterns and discover relationships between different data elements is often referred to as:

☐ Data mining

☐ Data digging

Simona

Buongiorno prof

Potrei avere una spiegazione riguardante la domanda n.5 del quiz finale?
